

This new Vallfirest fire protection mask protects the face from radiation, helps prevent burns and reduces the inhalation of smoke and ash particles due to the particle filter inserted inside the mask.

The Vallfirest fire protection Mask features an activated carbon filter and is equipped with an exhalation valve and high-visibility reflective strips all over it.

The Vallfirest Mask for personal fire protection can be put on without needing to take off the helmet, as it has a double Velcro system in case it needs to be used. It can also be hung around a firefighter's neck when it is not being used.
